GÜÇLER/POWER (KW)

POLY-V KASNAKLARIN AVANTAJLARI ADVANTAGES OF THE POLY-V PULLEYS

Çoksayıda veince V kanalları olankasnaklardır. Kanal derinlikleri diğer V kasnaklara göre daha azdır. Kasnaklarda, kanal genişliğinde bulunan diş sayısı kadar tek kayış kullanılmaktadır. Bu nedenle her kanala eşit oranda gergi kuvveti uygulanacağından %2 ila %5 arasında verim kayipları oluşturmaktadır. Bu da hem kayışın hem de kasnağın ömrünü uzatmaktadır. Poly-V kasnaklarda kayışın bütün yüzeyleri kavramasından dolayı tutunma kuvvetli, kayma az olmaktadır.

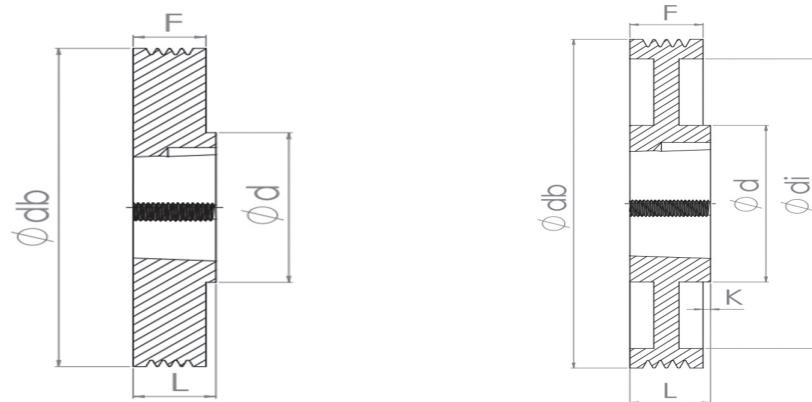

Poly-V kasnaklarda derinlik azdır. Bu nedenle küçük çaplarda imal edilebilmesi mümkünür. Bu özellik kasnakların daha verimli çalışabilirliğini ve daha küçük çaplarda yüksek torkların elde edilebilmesini sağlamaktadır. Bu kasnaklar küçük güç ve yüksek devirde kullanılabilıldığı gibi, büyük güç iletken (400 KW-10000 Dev/Dak.) tipleri de mevcuttur. Poly-V kasnaklar kendi aralarında aktardıkları güçlere göre, ince dişten kalın dişe göre farklı adımlarda PH, PJ, PK, PL, PM olarak tiplere ayrılmaktadır. Hangi tip kasnak kullanmamız gerektiğini eldeki verilere göre tablodan seçilir ve istenilen tip ve diş sayısında kasnak imal edilir. Poly-V kasnak kullanıldığından çap %40 küçülürken eninden de %40 küçülmektedir. Bundan dolayı malzemenin küçülmesi, mekanizmaya bağlı olan bütün makine elemanlarını ve fonksiyonları etkileyeceğinden dolayı çok önemlidir.

Poly-V kasnaklar makine imalatı ve otomotiv sektöründe pok kul lanılmasmadan dolayı piyasalarda istenilen tip ve dişinde kayış bulabilmek ve istenilen kalite ve fiyatlarında kayış temin edilmesi gibi alanlar genişlemektedir. Bundan dolayı imalat sektörünün tercih sebepleri arasında yer almaktadır.

These pulleys have many types and thin V grooves. The depth of grooves is less than the other V Pulleys. It is used to a only belt as number of teeth on wide of Groove. Therefore, it is happened to degradation between 2 and 5% due to the applying on uniformly tensile force to each Groove. It is prolong both the belt and the pulley's life. Because of the Poly V pulleys holding is strong ,the sliding is low.

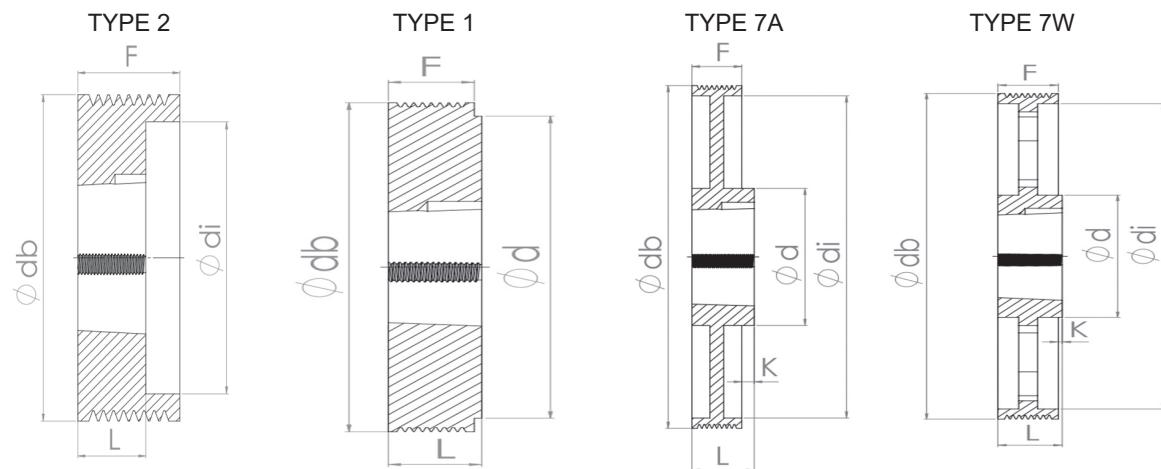

The poly v pulleys have less depth. Therefore, it is possible to manufacture as small diameters. This feature is provided to get more efficient and high torque in small diameter pulleys. These pulleys can be used in small power and high speed pulleys, and also the big power can be transferred types(400 KW-10000 speed/min.). The Poly V pulleys are divided into types according to the Powers of transferring between each other and acc. To the types of teeth structure as thin or thick PH,PJ,PK,PL,PM .. It is selected from the chart acc. To your current information which pulley you should use and it is produced acc. To required type and number of teeth pulley. When the Poly V pulley is used , the diameter is reduced 40% ,and the width is also reduced as 40%. Because of the fact that the reducing of the good, it is so important to affect to all machine equipments and functions.

Due to the Poly V pulleys are much used in machine manufacturing and automotive industry, it is widen to supply about the required type and measure belts and required quality and prices of belts. It is reason for preference of the manufacturing industry.
